PRESS RELEASE

MORE NEXT GENERATION 1” EXIT COMPRESSION DRIVERS FROM LAVOCE

POTENZA PICENA, March 2019 – Lavoce Italiana, the transducer company with a heritage of over 30 years designing and manufacturing loudspeaker transducers, are proudly showing three new models of their next generation of 1” exit ferrite magnet compression drivers at Pro Light+Sound, DF10.142LM, DF10.171LK and DF10.172LK, all carefully optimised to offer best in class quality and value.

To compliment the already the successful production launch of DF10.142LK at NAMM in January, which uses a Polyimide diaphragm and a 1.4” CCAW voice coil to deliver a very useful 35W AES power rating, 106dB sensitivity and a linear frequency response to 20kHz, the DF10.142LM offers an alternative sonic performance and an even more competitively priced option, employing a Polyester diaphragm, with a 25W AES power rating and a similar linear frequency trend to 20kHz.

Using the same design and performance ethos, the DF10.171K and DF10.172LK both use Polyimide diaphragms for a wider useable frequency band and improved power handling, and have 1.7” copper clad aluminium voice coils, to deliver an impressive 55W AES power handling, 106.5dB sensitivity, and 60W AES power handling, 108.5dB sensitivity respectively.

Kevin Shove, International Sales Director, adds, ‘By first analysing every aspect of the production process, then carefully considering this research for the electroacoustic target, our team have been able to improve production efficiency, at the same time improving acoustic behaviour, to offer an enviable cutting edge performance-price ratio for each of these new compression drivers.’
