PRESS RELEASE

PLUG AND PLAY COAXIALS FROM LAVOCE

POTENZA PICENA, February 2020 – Lavoce Italiana, the transducer company with a heritage of over 30 years designing and manufacturing loudspeaker transducers, will be showing their updated 5" and 6.5" coaxials, incorporating built-in optimized passive crossovers for simple 'plug and play' pro audio and PA applications, at Integrated Systems Europe.

CSF051.21 and CSF061.21 are 5" and 6,5" coaxial designs that draw on Lavoce's engineering team's car audio heritage and offer cost-effective solutions for small infill or complementary audio solutions. Both units are rated at 50W AES and employ a ferrite motor for the woofer and a custom soft dome tweeter neodymium powered, together with the optimized passive crossovers concealed under a stylish rear magnet cover. Each unit delivers extended frequency responses over 20kHz with constant directivity, and employ waterproof treated paper cones, to provide simple plug and play solutions with excellent price-performance ratios.

Kevin Shove, International Sales Director, comments, 'These compact coaxial transducers are really great value and are an example of the wide diversity in our product range, from small compression drivers and fullrange speakers to large voice coil subwoofers. Our development for higher power common motor coaxials has already started so there are even more exciting solutions coming.'
